**ABSTRACT OF THE DISCLOSURE**

2 An audio program distribution arrangement for use in connection with a server in a home  
3 area network is described. The audio program distribution arrangement is configured to distribute  
4 audio programming over a local audio link. The audio program distribution arrangement comprises  
5 an audio programming information receiver module, an audio programming information assembler  
6 module and a control module. The audio programming information receiver module is configured  
7 to receive audio programming information from a plurality of sources. The audio programming  
8 information assembler module is configured to generate assembled audio programming information  
9 by selectively assembling said audio programming information as received by the audio  
10 programming information receiver module into a selected set of frequencies for transmission over  
the local audio link. The control module configured to control the audio programming information  
receiver module and the audio programming information assembler module.
